Terms of Use

These data are distributed under the following terms of use. By continuing past this page, you signify your agreement to comply with the requirements as stated below:

Privacy of Research Subjects

Any intentional identification of a research subject (whether an individual or an organization) or unauthorized disclosure of his or her confidential information violates the promise of confidentiality given to the providers of the information. Disclosure of confidential information may also be punishable under federal law. Therefore, users of data agree:

- To use these datasets solely for research or statistical purposes and not for re-identification of specific research subjects.
- To make no use of the identity of any research subject discovered inadvertently and to report any such discovery to CBHSQ and SAMHDA (samhda-support@samhsa.hhs.gov)

Citing Data

You agree to reference the recommended bibliographic citation in any of your publications that use SAMHDA data. Authors of publications that use SAMHDA data are required to send citations of their published works for inclusion in a database of related publications.

Disclaimer

You acknowledge that SAMHSA will bear no responsibility for your use of the data or for your interpretations or inferences based upon such uses.

Violations

If CBHSQ determines that this terms of use agreement has been violated, then possible sanctions could include:

- Report of the violation to the Research Integrity Officer, Institutional Review Board, or Human Subjects Review Committee of the user's institution. A range of sanctions are available to institutions including revocation of tenure and termination.
- If the confidentiality of human subjects has been violated, then report of the violation may be made to the Federal Office for Human Research Protections. This may result in an investigation of the user's institution, which can result in institution-wide sanctions including the suspension of all research grants.
- Report of the violation of federal law to the United States Attorney General for possible prosecution.
- Court awarded payments of damages to any individual(s)/organization(s) harmed by the breach of confidential data.

Definitions

Promise of confidentiality

A promise to a respondent or research participant that the information the respondent provides will not be disseminated in identifiable form without the permission of the respondent; that the fact that the respondent participated in the study will not be disclosed; and that disseminated information will include no linkages to the identity of the respondent. Such a promise encompasses traditional notions of both confidentiality and anonymity. In most cases, federal law protects the confidentiality of the respondent's identity as referenced in the Promise of Confidentiality. Under this condition, names and other identifying information regarding respondents would be confidential.

Research subject

A person or organization that participates in a research study. A research subject may also be called a respondent. A respondent is generally a survey respondent or informant, experimental or observational subject, focus group participant, or any other person providing information to a study.

Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

DRUG ABUSE WARNING NETWORK (DAWN), 2013

INTRODUCTION

The [Drug Abuse and Warning Network \(DAWN\)](#) was initially established by the Drug Enforcement Administration in the early 1970s. Then DAWN was transferred to the U.S. Department of Health and Human Services (HHS), where the National Institute on Drug Abuse (NIDA) conducted DAWN from 1980 to 1992. Since 1992, the Office of Applied Studies (OAS) of the Substance Abuse and Mental Health Services Administration (SAMHSA), HHS has been responsible for DAWN operations and reporting. In the fall of 2010, the OAS was renamed to the Center for Behavioral Health Statistics and Quality (CBHSQ).

DAWN is a nationally representative public health surveillance system that continuously monitors drug-related visits to hospital emergency departments (EDs). DAWN is a network of over 250 hospitals that provides data on these visits to SAMHSA. Annually, DAWN produces estimates of drug-related visits to hospital EDs for the Nation as a whole and for selected metropolitan areas. DAWN is used to monitor trends in drug misuse and abuse, identify the emergence of new substances and drug combinations, assess health hazards associated with drug abuse, and estimate the impact of drug misuse and abuse on the Nation's health care system.

USES OF DAWN DATA

DAWN is the only data system providing estimates of the number of ED admissions associated with drug misuse and abuse and the particular drugs involved both for the United States as a whole and also for selected metropolitan areas. These estimates are used to monitor trends in major substances of abuse (e.g., heroin, cocaine, marijuana), to assess alcohol use by minors that results in ED visits, to identify emerging new drugs of abuse (e.g., synthetic cannabinoids, methamphetamine), to identify the abuse potential of prescription and over-the-counter drugs to better inform labeling and scheduling decisions, and to reveal changing patterns of drug abuse. Furthermore, DAWN is the only national data collection system on drug abuse with the capacity to monitor specific and relatively infrequently used substances of abuse (such as club drugs, phencyclidine [PCP], or medications used to treat attention deficit hyperactivity disorder) as they emerge and diffuse across population groups and geographic areas.

DAWN is a major component of the Nation's capacity to monitor trends in the morbidity and mortality associated with drug misuse and abuse. It is used by national, State, and local professionals to monitor trends in the health hazards associated with substance abuse and to identify emerging trends and changing patterns of drug abuse. DAWN offers data of value to policymakers, law enforcement officers, pharmacologists, and health professionals. The data are used by the White House Office of National Drug Control Policy to monitor national trends; the Drug Enforcement Administration for surveillance, diversion control, and intelligence; and the Food and Drug Administration and pharmaceutical industry to conduct post marketing surveillance of prescription and over-the-counter pharmaceuticals, actively monitor adverse events associated with medications that are new or currently on the market, and assess the abuse

potential for labeling and scheduling decisions. State and local professionals, including law enforcement and the Community Epidemiology Work Group, use DAWN to assess changes in local trends and patterns of drug use. The Substance Abuse and Mental Health Services Administration (SAMHSA) itself uses DAWN to target program resources to areas of greatest need and to monitor adverse events associated with buprenorphine treatment for opiate addiction.

WHAT IS A DAWN CASE

A DAWN case is any ED visit involving recent drug use that is implicated in the ED visit. DAWN captures both ED visits that are directly caused by drugs and those in which drugs are a contributing factor but not the direct cause of the ED visit. The reason a patient used a drug is not part of the criteria for considering a visit to be drug related. These criteria broadly encompass all types of drug-related events, including accidental ingestion and adverse reaction, as well as explicit drug abuse. DAWN does not report current medications (i.e., medications and pharmaceuticals taken regularly by the patient as prescribed or indicated) that are unrelated to the ED visit.

The DAWN visit eligibility criteria are intended to be broad and inclusive and to have few exceptions. They take into account the fact that documentation in medical records varies in clarity and comprehensiveness across hospitals and among clinicians within hospitals. The criteria are designed to minimize the potential for judgments that could cause data to vary systematically and unexpectedly across different data collectors and hospitals. In addition, the criteria allow for the capture of a diverse set of drug-related visits that can be aggregated or disaggregated to serve a variety of analytical purposes and the interests of multiple audiences.

There are a few clearly delineated exceptions to the DAWN eligibility criteria. An ED visit is **not** a DAWN visit if

- There is no evidence of recent drug use;
- the patient left the ED without being treated;
- the patient consumed a non-pharmaceutical substance but did not inhale it,
- the patient has a history of drug use but no recent use;
- alcohol is the only substance involved and the patient is an adult (aged 21 or older);
- drugs mentioned in the ED records are not related to the ED visit (e.g., list of current medications);
- drugs identified in toxicology testing are not related to the visit, and the medical record does not contain any additional drug-related information that would make the visit a DAWN case; or
- the patient is being treated as a consequence of under medication (i.e., taking too little of a drug).

DAWN focuses on ED visits involving drug misuse or abuse. Seven categories of ED visits associated with drug misuse or abuse are highlighted in DAWN.

- overall drug misuse or abuse,
- illicit drugs used alone or in combination with other drugs,

- alcohol used in combination with other drugs (all ages),
- underage drinking (alcohol use by persons aged 20 or younger),
- nonmedical use of pharmaceuticals,
- drug-related suicide attempts, and
- patients seeking detox services.

Drug misuse or abuse is an overarching category that includes all ED visits involving drug misuse or abuse. Visits involving the use of illicit drugs are singled out for analysis because they involve substances that are generally illegal and, by definition, constitute substance abuse. Visits involving alcohol used in combination with other drugs are analyzed as a group to better understand the interactive effects of alcohol and drugs on morbidity. ED visits involving underage drinking are studied as an important barometer of dangerous drinking patterns in youths. Nonmedical use of pharmaceuticals refers to ED visits related to the misuse or abuse of prescription or over-the-counter medications or dietary supplements. This might result from taking a higher-than-prescribed or -recommended dose of a pharmaceutical (i.e., contrary to directions or labeling), taking a pharmaceutical prescribed for another individual, being maliciously poisoned by another individual, and abusing pharmaceuticals. Drug-related suicide attempts involve drug overdoses as well as suicide attempts by other means (e.g., by gun) if drugs were involved. "Seeking detox" includes various situations such as nonemergency requests for admission for detox, visits to obtain medical clearance before entry to a detox program, and acute emergencies in which an individual is in distress (i.e., displaying active withdrawal symptoms) and seeking detox.

WHAT DRUGS ARE INCLUDED

DAWN collects data on all types of drugs, including

- illegal drugs, such as heroin, cocaine, marijuana, and Ecstasy;
- prescription drugs, such as Prozac®, Vicodin®, Oxycontin®, alprazolam, and methylphenidate;
- over-the-counter medications, such as aspirin, acetaminophen, ibuprofen, and multi-ingredient cough and cold remedies;
- dietary supplements, such as vitamins, herbal remedies, and nutritional products;
- anesthetic gases;
- substances that have psychoactive effects when inhaled;
- alcohol when used in combination with other drugs (all ages); and
- alcohol alone (only for patients aged 20 or younger).

DRUG VOCABULARY

DAWN relies on a comprehensive drug vocabulary and classification system. This information applies to the variables that contain the prefix of DRUGID, CATID, and SDLED in the public use file. The DAWN drug reference vocabulary (DRV) is a system of tables that DAWN uses to record, code, and classify reportable substances.

The foundation of the DAWN DRV is the Multum *Lexicon*, © 2011, a drug vocabulary and classification system developed and maintained by Multum Information Services, Inc., a private sector firm. The Multum *Lexicon* was selected because it met DAWN's needs for a robust and flexible system for coding and classifying thousands of drugs and other substances. DAWN has adapted the *Lexicon* to allow for the inclusion of illegal drugs, inhalants, and alternative medicines that are reported to DAWN.

The result is a multipurpose database with:

- Illicit drugs, prescription and over-the-counter medications, dietary supplements, and non-pharmaceutical inhalants.
- A common structure, regardless of drug type.
- Integrated descriptive categories for classification and aggregation.

CASE TYPES

By design, DAWN's broad case criteria yield a diverse set of visits. To bring order to this heterogeneous mix of ED visits, DAWN Reporters assign each visit to one of eight case types. The eight case types are as follows:

- suicide attempt
- seeking detoxification;
- alcohol only, in patients younger than 21;
- adverse reaction;
- overmedication;
- malicious poisoning (e.g., drug-facilitated sexual assault, product tampering);
- accidental ingestion; and
- other.

Each ED visit is assigned to a *single* case type. Because many ED visits meet the criteria for more than one case type, the case types are assigned based on an algorithm depicted in the "DAWN Decision Tree. Each ED visit is assigned to the first applicable case type.

The final category in the decision tree, *Other*, is reserved for DAWN visits that do not meet any of the rules for classification into one of the first seven types. Most cases of drug abuse are classified as *Other*. This approach, which never directly identifies drug abuse, comes from the recognition that medical records frequently lack explicit documentation of substance abuse. This lack of documentation may occur for several reasons. First, the distinctions among use, misuse, and abuse are often subjective. Second, if there is a low index of suspicion for drug abuse in some types of patients (e.g., older adults), ED physicians may be unlikely to label those types of patients as drug abusers. Third, ED staff may be concerned that the patient's insurance company will disallow coverage if the visit is related to substance abuse.

VISIT DISPOSITION

The visit disposition records where the patient went after leaving the ED. There are three major categories: treated and released, admitted to this hospital, and other dispositions. Additional detail is provided with subcategories.

Treated and released includes three subcategories:

- *Discharged home*—"Home" is used as a broad category to mean the patient's residence. Home is generally used for persons who live locally; however, for students at nearby universities, home means their university; for travelers who get sick on the road, it may mean their hotel or wherever they are staying; and so on.
- *Released to police/jail*—Patients released to police/jail were usually brought to the ED by the police for treatment of an acute medical problem or for medical clearance before being placed in the jail population.
- *Referred to detox/treatment*—The chart indicates that the patient was referred to a substance abuse treatment or detoxification program, facility, or provider.

Admitted to this hospital includes five subcategories:

- intensive or critical care unit,
- surgery,
- chemical dependency/detox unit,
- psychiatric unit, and
- other inpatient units.

Other disposition includes five subcategories:

- *Transferred*—The patient was transferred to another health care facility.
- *Left against medical advice*—The patient left the treatment setting without a physician's approval.
- *Died*—The patient died after arriving in the ED but before being discharged, admitted, or transferred.
- *Other*—The discharge status is documented in the patient's chart but does not fit into any of the preceding categories.
- *Not documented*—The patient's discharge status was not documented in the medical chart.

Although visit dispositions may be reported using the 13 subcategories or the three major categories, a third way that often appears in DAWN reports and tables is to group ED visits based on whether there is any indication in the ED record that the patient received some type of follow-up treatment. "Evidence of follow-up" includes patients who were referred to detox/treatment, admitted to the hospital (any unit), or transferred. "No evidence of follow-up" includes patients with any other disposition.

DESIGN AND METHODOLOGY

Since its inception, DAWN has relied on data collected from a sample of hospitals. However, over the years, the exact survey [methodology](#) has been adjusted to improve the quality, reliability, and generalizability of the information produced by DAWN. When NIDA assumed responsibility for DAWN in 1980, implementation of a sample of hospitals to produce representative estimates for the Nation and for selected metropolitan areas became a priority. This sample, refreshed with annual maintenance, continued to support DAWN estimates for the contiguous United States and 21 metropolitan areas until 2002. By that time, major population shifts and changes in the hospital industry over the preceding two decades made apparent the need for a redesign of the sample of hospitals, which was undertaken as part of a wholesale redesign of most major features of DAWN. The redesign was based on recommendations from a 1997 panel of experts and a two-year SAMHSA evaluation of design alternatives. A redesigned DAWN began collecting data in 2003. The redesigned DAWN includes the following features:

1. More health information, additional case data, and mortality data items.
2. Production of higher quality data through improvements to the sample and data collection designs.
3. A broadened definition of the incidences tracked to include all drug-related ED visits and deaths in order to capture adverse reactions to prescription and over-the-counter medications, accidental ingestions of drugs, and drug-facilitated assaults. Previously, the ED visits and deaths tracked were limited to those that were related to use of illegal drugs and nonmedical use of legal drugs.
4. The addition of ED visits related to underage drinking.

Currently, the DAWN survey relies on a longitudinal probability sample of hospitals located throughout the United States, including Alaska and Hawaii. To be eligible for selection into the DAWN sample, a hospital must be a non-Federal, short-stay, general surgical and medical hospital located in the United States, with at least one 24-hour ED. This current approach was first implemented in the 2004 data collection year.

The redesign of the Drug Abuse Warning Network (DAWN) system introduced in 2003 gave DAWN the capability to make statistically valid annual estimates of drug-related ED visits for the Nation and selected metropolitan areas. A new sample of hospitals was drawn through

stratified simple random sampling from among the universe of eligible hospitals in the Nation; oversampling was conducted in selected metropolitan areas.

Two goals guided the selection of the DAWN metropolitan areas. The first was to preserve the ability to represent the 21 areas that had been part of DAWN since its inception. The second was to improve population and geographic coverage beyond the 21 legacy areas. Accordingly, the design ensured representation of the original 21 legacy areas plus the 5 most populous Metropolitan Statistical Areas (MSAs) in each of the 9 census divisions. Oversamples (OS) were selected in a total of 48 MSAs; in 4 of those 48 MSAs, additional oversamples were drawn to allow reporting for subareas within those MSAs. Resources available to DAWN have allowed for data collection in only a portion of the OS areas. During data collection year 2013, data were collected from a representative sample of hospitals in the Nation and 13 OS areas.

Table 1. Metropolitan areas with published DAWN estimates of drug-related emergency department visits for 2013

| DAWN metropolitan areas (1) |
|--|
| Boston-Cambridge-Quincy, MA-NH MSA |
| Chicago-Naperville-Joliet, IL-IN-WI MSA |
| Denver-Aurora, CO MSA |
| Detroit-Warren-Livonia, MI MSA |
| Houston-Baytown-Sugar Land, TX MSA |
| Dade County Division (2) of Miami-Fort Lauderdale, FL MSA |
| Fort Lauderdale Divisions (3) of Miami-Fort Lauderdale, FL MSA |
| Minneapolis-St. Paul-Bloomington, MN-WI MSA |
| New York—5 Boroughs (4) (part of New York-Newark-Edison, NY-NJ-PA MSA) |
| Phoenix-Mesa-Scottsdale, AZ MSA |
| San Francisco Division of San Francisco-Oakland, CA MSA |
| Oakland Division of San Francisco-Oakland, CA MSA |
| Seattle-Tacoma-Bellevue, WA |
| (1) Unless otherwise noted, DAWN defines metropolitan areas using the Metropolitan Statistical Area (MSA) and Division definitions issued by the Office of Management and Budget in June 2003 (available at http://www.whitehouse.gov/omb/bulletins/b03-04.html). |
| (2) Miami-Miami Beach-Kendall, FL Division. |
| (3) Fort Lauderdale-Pompano Beach-Deerfield Beach, FL and West Palm Beach-Boca Raton-Boynton Beach, FL Divisions. |
| (4) Includes New York City’s 5 boroughs: Bronx, Kings, New York, Queens, and Richmond. |

CONFIDENTIALITY PROTECTION

Several measures have been taken to protect the confidentiality of DAWN data:

In the public use file, complex design variables have been adjusted to optimize disclosure protection while preserving the original design and statistical properties of the data to the highest degree possible. Specifically, each year PSUs are randomly selected for combination or division and original strata may be combined with adjacent strata. Self-representing PSUs may be treated as non self-representing as a result of this process. Case weight, replicate, and PSU frame count values are adjusted to reflect changes to PSUs and strata and to further maximize disclosure protection.

PSU and strata identification values are randomized each year. While DAWN is not designed to identify the contribution or influence of a particular hospital, applied disclosure protection methods and identification value randomization preclude multi-level modeling at the hospital-level and comparison of individual sampling units over time.

While disclosure protection has been applied to minimize deviance from the original sampling error calculation model, statistical analyses generated from the public use file may vary from results provided on the DAWN web site. For online analysis using Survey Documentation and Analysis (SDA), complex design variables are used to generate statistical results, but are not directly accessible. Therefore, SDA utilizes original design variables modified slightly to accommodate the variance estimation capabilities of the SDA statistical program.

The original variables recoded for disclosure protection include:

- Quarter: Month of episode has been recoded into quarter.
- Day part: Exact time of episode has been recoded into four day part categories.
- Case disposition: “Chemical dependency/detox” has been combined with “Psychiatric unit”. Hospitals with combined chemical dependency and psychiatric units are included in the “Other inpatient unit” disposition category.

Drug Abuse Warning Network (DAWN), 2011

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
